

## Harmony Platform

### VP Module with Advanced Fluorescence Technology

The **AFT VP Module of the Harmony Platform** provides innovative technology for non-invasive treatment of vascular and pigmented lesions. The VP (540-950nm) handpiece allows you to treat a broad spectrum of vascular imperfections by selectively targeting oxyhemoglobin, deoxyhemoglobin and melanin.

- **Fast** – large spot size (6.4 cm<sup>2</sup>) enables rapid treatment
- **Easy to use** – ergonomic handpiece
- **Treat port wine stains, hemangiomas, telangiectasias, rosacea, angiomas, Poikiloderma of Civatte**
- **Treat lentigos, melasma, seborrheic keratoses, café-au-lait, pores, erythema, flushing, dyschromia, ephelides, dyspigmentation**
- **No downtime** – safe and efficacious results

#### The Most Advanced Light-Based Technology for Vascular and Pigmented Lesions

To achieve precise, selective absorption of the light energy, the VP handpiece employs two novel electro-optical components:

- **Advanced Fluorescence Technology - AFT™**

A special filtering system converts the unused shortwave light into the visible green spectrum (540-950nm), increasing spectral emission and penetration, without excess energy levels for safer, more effective treatments.

- **Equally Distributed Fluence - EDF™**

An innovation in electronics which enables continuous square-shaped pulsing for moderate peak power throughout the entire pulse, for efficacious, safe results.
